medical image databases covers the new technologies of biomedical imaging databases and their applications in clinical services education and research authors were selected because they are doing cutting edge basic or technology work in relevant areas this was done to infuse each chapter with ideas from people actively investigating and developing medical image databases rather than simply review the existing literature the authors have analyzed the literature and have expanded on their own research they have also addressed several common threads within their generic topics these include system architecture standards information retrieval data modeling image visualizations query languages telematics data mining and decision supports the new ideas and results reported in this volume suggest new and better ways to develop imaging databases and possibly lead us to the next information infrastructure in biomedicine medical image databases is suitable as a textbook for a graduate level course on biomedical imaging or medical image databases and as a reference for researchers and practitioners in industry

as the biomedical engineering field expands throughout the world clinical engineers play an ever more important role as the translator between the worlds of the medical engineering and business professionals they influence procedure and policy at research facilities universities and private and government agencies including the food and drug administration and the world health organization clinical engineers were key players in calming the hysteria over electrical safety in the 1970s and y2k at the turn of the century and continue to work for medical safety this title brings together all the important aspects of clinical engineering it provides the reader with prospects for the future of clinical engineering as well as guidelines and standards for best practice around the world

three decades have passed since my first personal experiences influences and contacts with computer applications in the field of medicine these experiences were influenced by diverse presentations publications and seminars concerning

various applications of information technology as early as in 1970 univac international executive centre rome the first clinical proposals and discussions during the first world congress of intensive care medicine london 1974 strongly impressed me since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology in 1975 when i started my radiology residency my clinical and academic interests were focused on two major topics i interventional radiology and the clinical responsibility of the radiologist for the patient and ii the improvement of radiological services for both the clinician and the patient through the use of digital technology these two topics firstly interventional radiology and secondly computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my personal evolution of medicine especially of digital radiology

creating new medical ontologies for image annotation focuses on the problem of the medical images automatic annotation process which is solved in an original manner by the authors all the steps of this process are described in detail with algorithms experiments and results the original algorithms proposed by authors are compared with other efficient similar algorithms in addition the authors treat the problem of creating ontologies in an automatic way starting from medical subject headings mesh they have presented some efficient and relevant annotation models and also the basics of the annotation model used by the proposed system cross media relevance models based on a text query the system will retrieve the images that contain objects described by the keywords

the technological advances in biomedical and health informatics bmhi in the last 4 decades could barely have been imagined when the field was in its infancy at the time computers were large and unwieldy memory was measured in kilobytes and the internet was accessible only to people in the technology professions how the world has changed the skills of bmhi are now essential for everyone who participates in healthcare from practitioners and researchers to administrators and patients this book presents the 17 accepted papers of the international symposium on achievements milestones and challenges in biomedical and health informatics bmhi held in athens greece on 29 october 2022 this event marks the retirement of professor john mantas whose career in bmhi spans over 40 years and a number of eminent colleagues from around the world were invited to present original review papers in their respective domains not only to celebrate the work of professor mantas but to review the achievements milestones and challenges of bmhi most of those presenting papers have worked in the field for decades and their collective experience and wisdom highlights

the accomplishments and limitations of the field each paper was peer reviewed by 3 independent reviewers before being thoroughly revised ensuring the high quality of the accepted papers the book is dedicated to the entire bmhi community it covers the achievements attained the milestones reached and the challenges which have been overcome or which have not been conquered and provides knowledge and perspective for both learners and practitioners in the field
